

Berechnen Sie die Flächen (Masse in cm).

$$A = 14 \cdot 9 - 6 \cdot 3 - \frac{5 \cdot 14}{2} = 126 - 18 - 35 = 73 \text{ cm}^2$$

Die Flächen der Rechtecke sind: 9 und 6

Helles Trapez:  $\frac{6+1}{2} \cdot 6 = 21$

Dunkles Trapez:  $\frac{6+1}{2} \cdot 1 = 3.5$

Damit ergibt sich:  $2(9 + 6 + 21 + 3.5) = 79 \text{ cm}^2$
